

WHEELCHAIR TIE-DOWNS

4-Points restraints (Reference 9519)

The anchoring system with adjustable front and back straps.

The 4-point restraints system is a simple but effective method to ensure the chair is secured during transport.

- The two rear straps are fully adjustable thanks to a simple mechanism that allows tensioning the straps for greater safety.
- The front anchors are equipped with a buckle closure for easy use.
- The rear anchors are equipped with a carabiner closure.
- This kit is tested to withstand forces of 120 kg to each elements.
- Can be installed in M1, M2 and M3.

4-Point restraints system with QUATTRO system (Reference 9532)

A retractable system with automatic tension mechanism to secure the wheelchairs.

The wheelchair restraint system incorporates a tensioner on the left and right side of the reel to easily secure the chair during transport.

- Can be installed in M1, M2 and M3
- All Quattro systems have been dynamically tested to hold a wheelchair up to 120 kg, and therefore more compatible with a wider range of wheelchair designs.
- Possibility of acquiring only the rear bracket with QUATTRO system (Reference 9532/1)

Forward restraint
