

Lift EVO:

The EVO cassette lift is a semi-automatic lift designed with the aim to allow wheelchair users the access into coaches, maximizing the simplicity of the use and optimizing the costs. The lift was conceived with a modular approach so that it can be adapted to suit any particular application and can be fitted to any vehicle.

The silent and easy electrohydraulic system allows the wheelchairs an easy access to and from coaches. They are all equipped with a manual emergency pump to ensure operation in case of lack of power or any other problems.

All lifts of this range are compliant with the current European rules on accessibility to vehicles.

EVO
