

## Lift BBV

The BBV models are double arm lifts that are entirely automatic and controlled by a cabled remote control. The platform is made of an anti-slip mesh, which folds vertically, which makes this range different from the others.

The silent and easy electrohydraulic system allows the wheelchairs an easy access to and from special vehicles. They are all equipped with a manual emergency pump to ensure operation in case of lack of power or other problems.

This type of lifts ensures that there is access to the door on which it is installed.

All lifts of this range are compliant with the current European rules on vehicle accessibility.

	135.80	103.75
<i>Maximum Capacity</i>	360kg	320kg
<i>Weight</i>	140kg	110kg
