

DOUBLE RAMP HGR COMFORT:

Two ramps, one manual book type and another electric telescopic type, both built-in the vehicle floor in one same unit. The HGR COMFORT has been created for low-floor vehicles and, it has been designed from the beginning to facilitate its use and reduce the possibilities of failures.

Main advantages:

- 1- The electric ramp is telescopic and built-in the vehicle floor, so it doesn't come out below the vehicle chassis as other cassette ramps
- 2- The manual book type ramp is at the same height of the vehicle floor.
- 3- Controlled by PLC with the possibility of connecting a display with diagnosis.
- 4- The telescopic ramps works with a rack and pinion mechanism that makes durable and reduces the possibilities of incidents.

HGR COMFORT closed

HGR COMFORT with manual ramp open
